

Split the stack into two logically separate devices and run HSRP. The downside here is that your downstream switches can't do port channels split between the two chassis. So when one of the "new ...

Does the core connect to a disti layer or collapsed backbone or something else? Depending on what the core is actually doing will inform what suggestions we might make.

Owing to the importance of core switches, the quality and performance of the core network switches must be tested. To ensure that the switches can perform tasks of the core layer or collapsed core ...

It's advisable to choose a core switch with link aggregation capabilities to ensure efficient transmission of traffic from the aggregation switch to the core switch.

Hi all, I need some help to understand the stepwise approach to split my existing core switch stack of 2 x c9500 into separate core switches (like Core1 & Core 2).

Unlike access switches, which connect directly to end-user devices, the core switch focuses on aggregating and routing traffic between other switches, minimizing latency and ...

Your CORE switching should be somewhere centralized in the physical termination of your network connectors, assuming [or course] you have redundant power/HVAC/UPS there (if not - it ...

In case of problems in a certain switch between core switch and dual aggregation switch, three-layer routing equipment and virtual gateway can be quickly switched to realize redundant backup of dual ...

Solved: hi guys . i have a network with below topology. In the core layer, I want to have redundancy, which means that if the main core switch of my network has a problem, the backup ...

In a large enterprise, the core switch aggregates data from multiple distribution switches and routes it rapidly across the local area network (LAN) or toward the data center.
