

Distribution automation (DA) is a family of technologies, including sensors, processors, information and communication networks, and switches, through which a utility can collect, automate, analyze, and ...

Utility companies in today's power and energy sectors rely heavily on distribution automation to keep the grid running at peak efficiency. MCA provides mission critical-grade wireless networking solutions ...

While Distribution Automation can improve efficiency, cost and speed of many distribution grid processes, a fit-for-purpose communications network is required to support the level of data that will ...

Leviton STRUCTURED MEDIA Centers create the ideal central distribution point to manage your residential structured cabling network, boosting performance for wired and wireless networks. The ...

Hitachi Energy offers high-performance broadband, narrowband and cellular solutions that can work together to provide utilities with an optimal end-to-end communications network that enables a wide ...

These features enable Distribution Automation (DA) operations by coordinating field devices, specialized software, and dedicated communication networks. This coordination allows the system to ...

The handbook describes various power distribution system constructions and elements there-of, technical considerations, distribution automation infrastructure and functionality, communication ...

Improve the reliability and availability of power distribution grids. Siemens Distribution Automation functionality ranges from monitoring to fully automated applications, including FLISR (fault location, ...

Tait Communications designs and delivers tailored Distribution Automation (DA) utilities solutions for the electricity sector worldwide.

Maintaining high reliability throughout the distribution grid is one of your highest priorities as an electricity provider. Learn how Itron's distribution automation communication solutions help utilities identify ...
