

The roll-out of interconnectors - the technical term for cables between Europe's wholesale electricity markets - is too slow. To optimise the European grid by 2030, Europe needs a ...

Explore and compare energy data, analysis, news and events for Europe

The EU has set an interconnection target of at least 15% by 2030. To achieve its climate and energy goals, Europe needs to improve cross-border electricity interconnections.

Europe's electricity system is the world's largest interconnected grid, with more than 400 interconnectors linking nearly 600 million citizens. It is operated, developed and planned by Europe's ...

Expansion of networks and interconnections across vast areas and borders, linking remotely generated renewable energy to a unified grid system, is essential to achieving Europe's climate targets. At ...

Interconnection is the vital missing piece in Europe's renewable energy puzzle. Expanding cross-border electricity exchange will be critical to ...

Find out how the EU plans to strengthen its energy infrastructure and cross-border interconnections with its TEN-E policy, the grids package and the Connecting Europe Facility.

Cross-border electricity trading lowers energy costs and increases market efficiency, encouraging investment in renewable energy projects. Interconnectors also reduce dependence on ...

Expansion of networks and interconnections across vast areas and borders, linking remotely generated renewable energy to a unified grid system, is essential to ...

This is where electricity grids come in, with a special role for cross-border interconnectors in the European context. The present moment is a crucial opportunity to plan how Europe's energy ...

To enhance market efficiency, renewable energy sources integration, and power system balancing, the European Union promotes increased cross-border interconnection and cooperation ...

Cross-border electricity trading lowers energy costs and increases market efficiency, encouraging investment in renewable energy projects. ...

Interconnection is the vital missing piece in Europe's renewable energy puzzle. Expanding cross-border electricity exchange will be critical to harnessing the full potential of new ...
