

OFNP (Optical Fiber Non-conductive Plenum) is the highest flame retardant grade of fiber optic cable. When a fan is used on the fiber optic cable to force the flame to blow, the fiber cable will ...

OFN is the designation given by the National Fire Protection Association (NFPA) to interior fiber optic cables that contain no electrically conductive components and are not certified for ...

OFCP cables have the same fire and smoking rating as OFNP cables but they have a conducting armor or central strength member which is usually steel. OFCP cables must be properly grounded at both ...

OFNP jackets use Fluorinated Ethylene Propylene (FEP) with an Oxygen Index $>95\%$ to prevent ignition in air. LSZH jackets contain hydrated minerals that undergo an endothermic reaction, releasing water ...

In this article, we'll explore what a fiber optic cable jacket is, the common optical fiber cable jacket materials, the classification of fiber optic cable fire ratings (such as OFNP vs OFNR), ...

Learn the key differences between plenum (OFNP) and riser (OFNR) fiber cable jackets, including fire safety, code compliance, and proper installation locations for each cable type.

Choose from our selection of OFNP fiber-optic cable in a wide range of styles and sizes. Same and Next Day Delivery.

Compare fiber optic cable jackets and fire ratings (OFNP, OFNR, LSZH). Learn which type fits your installation for safety and performance.

When selecting fiber optic patch cables for data centers, commercial buildings, or telecom facilities, you may often notice markings such as OFNP, OFNR, LSZH, and PVC on the ...

OFNR stands for Optical Fiber Nonconductive Riser. This safety rating is usually given to PVC jackets. Cables with this rating are often used for vertical runs between buildings, but the applications are ...
