

How thick is the Prague fiber grating

For walkways and platforms, 38 mm (1.5 in.) bar depth often suits 24-36 in. spans under pedestrian loads; step up for heavier point loads or longer spans. The cover thickness is usually ...

Fiberglass grating is a composite material combining continuous glass fibers with polymer resin matrices. The performance characteristics depend on three critical factors: fiber orientation and ...

Provide the scope of your project and we'll produce the gratings with little effort to meet your project scope requirements. From colors to thicknesses ranging from 10 mm (3/8") to 110 mm (4 5/16"). We ...

Please note - The following molded grating panels are only available with the grit top surface (meniscus top not an option): 5/8" deep, 1" x 4" rect. mesh, 12" x 4" panel; 1-1/4" deep, 1-1/2" square mesh

Before choosing your next fiberglass grating, there are a number of factors that you need to clarify, including requirements for deflection, tolerances, grating height and span.

*Also represents load data for Micro-Mesh 1-1/2" deep x 3/4" square top mesh grating (4" x 12") panel. NOTES: All gratings were tested in accordance with the ANSI Standard: FRP Composites Grating ...

This solid fiberglass grating is good for wheel traffic and areas where you don't want small items and debris to fall through. It has an abrasive grit surface that provides good traction.

McNICHOLS carries Molded FRP Gratings, including MINI-GRID®; Molded Grating as well as DURADEK®; and DURAGRID®; Pultruded Grating construction types in a variety of sizes, resins, and ...

Used to attach molded or pultruded grating to support flanges that are less than 1/2" thick. Type "G" Hold Down clips are a friction clip and do not require drilling into the support flange.

By selecting the right material, spacing, thickness, and fixing method, gratings can provide efficient, long-lasting solutions for industrial and commercial flooring needs.
