

Is it safe to seal cable junction boxes on railways

Roxtec seals meet flammability, smoke emission and toxicity (FST) requirements for railway stations. The seals are easy to install around existing infrastructure without disrupting operations. Use our ...

With only a few parts, manufacturers get a strong reliable barrier against multiple threats. The multi-cable transits are quick and safe to install from one side of the structure and allow for sealing of ...

If a small, but crucial component as a cable or pipe seal fails, the consequences rapidly affect the total cost. By using the certified Roxtec sealing system as standard solution, you protect ...

The 480V cables act as extension cables to connect the wayside junction box to the rail car train set. The transit authority that approached Winchester was having problems with its current wayside ...

Roxtec sealing system for cables, conduits and pipes is used in many countries in traction power substations, cable trenches, railway stations, tunnels, shelters and cabinets along the tracks.

Use Roxtec seals to ensure safety and operational reliability. Use our seals to enhance safety and reduce maintenance costs. They protect systems in ...

Owners and rail operators, design and engineering firms, equipment manufacturers, contractors and installers standardize with Roxtec for urban, suburban, conventional, high-speed and freight railway.

When creating a rail vehicle it is mandatory to select reliable cable, pipe and conduit penetration seals to ensure protection and optimize efficiency.

Roxtec's design makes it easy to route pre-terminated cables into signal boxes, junction boxes, communication equipment enclosures and rail heating cabinets. Use our seals with armored cables ...

Vibration-Resistant Fixation: Fix the box through ZCEBOX metro-specific vibration-proof mounting bases (with built-in natural rubber buffer pads, ...

We design and manufacture custom electrical enclosures for the railway and tunnel sector, ensuring safety, reliability and long-term performance in the harshest environments.

Ideally it should provide mechanical protection, so it must be robust and stable, fire and vandal proof, capable of being opened and closed to maintain the cables or run new ones, be cost ...
