

UNISTRUT Seismic Bracing Solutions contractors, Specifiers, and others. We have decades of experience with real-world applications in severe seismic zones, supplying world-class products and solutions. ...

Designed in compliance with ASCE 7 and the International Building Code (IBC), these kits offer multidirectional restraint and meet stringent requirements for life safety and equipment survivability ...

Cablofil Wiremesh Cable Tray concept based upon performance, safety and economy; three qualities which make Cablofil Wiremesh Cable Tray system preferred by installers. Cablofil adapts to the most ...

**SEISMIC FORCES ACTING ON ELECTRICAL DISTRIBUTION SYSTEMS** When subjected to an earthquake, electrical distribution systems must resist lateral and axial buckling forces, and the ...

Seismic bracing, typically made of high-strength metal, is key component specifically designed to enhance the stability and safety of cable tray systems during earthquakes.

Our team of experts can help you select the best cable tray series for your application, as well as designing your seismic bracing layout to ensure it meets applicable building codes and standards.

This article discusses the importance of seismic resistance for cable trays, detailing when seismic braces are necessary, the factors that affect seismic resistance, and how to ensure your ...

Along with reliable, quality products that deliver lower total installed cost, Eaton provides pre-engineered details for lateral and longitudinal bracing of cable tray, single hung systems, and more.

Rigid-mounted conduit and cable trays are inherently very stable and subject to minimal seismic amplification. A detailed dead load design review of these systems provides ample margin for ...

We offer a pre-engineered, time-saving solution which braces and secures non-structural equipment within a building to minimise damage from earthquakes or seismic events.
