

# Low-noise optical module original and genuine product

The LNA-220 is a specially designed Erbium-doped fiber amplifier which offers a superior optical amplification performance with a very high gain factor and a minimal added noise.

Qorvo's low noise amplifiers provide industry-leading noise performance for applications requiring high sensitivity.

It seamlessly converts between optical Ethernet and standard RJ45 cable Ethernet, featuring an integrated low-noise linear power supply, ultra-low-jitter FEMTO oscillator, and four high-quality ...

The ORION 's packaging was designed with the customer's need in mind: highly integrated, small form factor and self-contained module. This optical solution is positioned for reducing the development ...

The 711 Series Ultra Low Noise Photodetector-Amplifier Modules offer a choice of variable or fixed gain amplifiers and the flexibility of incorporating various silicon or InGaAs detectors for low signal level ...

UBD series ultra-low noise balance detection module is an upgraded product based on the original MBD series. Compared with the original MBD series, its background noise is significantly reduced under ...

Explore Koheras BASIK fiber lasers with low phase noise, narrow linewidth, and robust single-frequency operation for industrial use.

MACOMs portfolio of low noise amplifiers offer a broad array of noise figures, input IP3, and input power in bare die and a variety of package types. Offerings include wideband distributed topologies and self ...

These highly integrated LNA MMICs come in smallest packages with ESD protection and low power consumption. They are ideal for battery-operated devices like wearables, Wi-Fi devices, and ...
