

In our latest Regional Economic Outlook for Asia and the Pacific, we document worrying early signs of fragmentation and provide evidence of the potential consequences of dissolving global ...

As industrial development and intensive farming expand across Asia-Pacific, the deforestation, forest fragmentation and habitat destruction they result in are driving humans and wildlife into close contact, ...

Research on the effects of geopolitics and geoeconomic fragmentation is currently a very active field, with national central banks and international organizations having prioritized geoeconomics and ...

Asia remains trapped in poverty, inequality, and underdevelopment. India stands out as an exception, having rapidly emerged as the world's fifth-largest economy. Meanwhile, external powers such as ...

Here, we map global distribution of forest fragments and their temporal changes between 2000 and 2020. We find that forest landscapes in the tropics were relatively intact, yet these areas...

Longer-term, model simulations suggest that a sharp fragmentation scenario, in which the world divides into separate trading blocs, would carry large, permanent output losses that are especially high for ...

With the world facing the risk of policy-driven geoeconomic fragmentation, this eBook aims at presenting a collection of state-of-the-art studies on the economic risks of a fractured world economy, and ...

North Asia is built around the Angara Shield, which lies between the Yenisey River and the Lena River. It developed from fragments of Laurasia, whose rocks were mainly Precambrian crystalline rocks, ...

After several decades of increasing global economic integration, the world is facing the risk of policy-driven geoeconomic fragmentation (GEF). This ...

This study examines the economic and financial implications of fragmentation for Europe and Asia. The empirical analysis centres on two channels through which fragmentation could impact economies, ...

We analyzed global forest fragmentation from 2000 to 2020 using complementary metrics that captured patch connectivity, aggregation, and structure.

Under the "moderate" and "extreme" fragmentation scenarios, G7 economies are unable to engage in financial transactions with countries whose geopolitical distances from the G7 economies exceed the ...
