Cool Shield(TM) containment offers state-of-the-art hot and cold aisle containment solutions designed to maximize data center efficiency while significantly reducing power consumption.

Aisle containment in the data center requires that cabinets are aligned in a hot aisle/cold aisle layout. Containment panels or strips create a partition to isolate either the server supply air (cold aisle ...

Cold aisle containment is a critical design approach in modern data centers aimed at enhancing cooling efficiency. It involves physically enclosing the cold aisle with panels and doors...

This is accomplished by encasing the cold aisle, the pathway in front of server racks from where the cool air is supplied. The main objective is to avoid combining hot and cold air to guarantee that the ...
