

Japanese memory manufacturer Kioxia had an intriguing demo on show at Computex this year, in a next-generation "Optical" SSD design. These drives utilize light, rather than electricity, ...

Kioxia, one of the leading companies in SSDs, has announced a new Optical Interface SSD for Next-Generation Green Data Centers.

At FMS 2024, the company is showing off a SSD with an optical ...

By integrating an optical interface, the new SSD technology offers ...

At FMS 2024, the company is showing off a SSD with an optical interface. This is one where hopefully Patrick, George, or Virginia will snap a few photos later this week, but here are the ...

In this paper, we introduce an optical SSD that employs a PCIe-based optical interface instead of the conventional electrical one. We have developed two printed circuit boards with optical-to-electrical ...

Kioxia, IO Core, and Kyocera are collaborating to develop a new type of SSD that uses optical wiring instead of traditional electrical connections. This design helps save power while still...

According to the storage giant, this new solution offers several key advantages over conventional electrically connected SSDs. The most important benefit we saw was the ability to offer ...

By integrating an optical interface, the new SSD technology offers greater physical flexibility and scalability in data center designs, facilitating improved energy efficiency and signal ...

In next-generation green data centers, by replacing the electrical wiring interface with optical and utilizing broadband optical SSD technology significantly ...

In next-generation green data centers, by replacing the electrical wiring interface with optical and utilizing broadband optical SSD technology significantly increases the physical distance ...

Kioxia America is showcasing a prototype broadband SSD with an optical interface for next-generation data centers, at this week's Future of Memory and Storage (FMC) conference in ...

According to the storage giant, this new solution offers several key advantages over conventional electrically connected SSDs. The most important ...

SSD paired with optical module

Three companies have announced the development of a prototype PCIe 5.0-compatible broadband SSD with an optical interface.
