

The H& M Machines X-Multi Fully Automatic Timber & Steel Frame Processing Bridge is an entirely automated system designed for securing ...

The H& M Machines X-Multi Fully Automatic Timber & Steel Frame Processing Bridge is an entirely automated system designed for securing sheeting and cladding materials, catering to the ...

These are perfect for manufacturing injection molds, casting dies, and stamping tools. It can be used in the production of turbine parts, power generation components, and heavy-duty enclosures. This ...

Up to a press size of 6300 kN, all machines can be delivered in a split cast iron construction. Alternatively, the delivery takes place in a combined construction cast iron / welded steel machine ...

Gap frame (C frame) mechanical stamping presses from AIDA, from 35 - 250 tons, are used for a wide variety of metal stamping and metal forming applications.

These features include Link Motion, which can bring tremendous increases in production quality and quantity, and our Bridge Frame structure, which can bring gap press performance to the levels of a ...

This comprehensive guide explores the major types of stamping presses, their core components, drive mechanisms, press selection criteria, and modern coil processing systems.

This comprehensive guide explores the major types of stamping presses, their core components, drive mechanisms, press selection criteria, and ...

This article discusses how link motion and bridge-frame structures help stampers. This includes a description of what link motion is and how it works, and how bridge frame presses affect ...

The Stamtec G2 series two-point gap frame press (a.k.a. OBG, OBS, OBI, or C-frame) is designed for stamping relatively long, narrow parts at high single-stroking rates or in continuous mode, using ...

A fully automatic multifunction nailing bridge for nailing or stapling sheet material onto timber frames. The H& M X-Multi is an automated system for securing sheeting and cladding in offsite and modular ...

The automatic blanking presses are standard machines with a modular design and a comprehensive selection of standard equipment for stamping conventional sheet metal parts from coils.
